

ATF Changer & Cleaner

ATF-102

Features

- Automatic identification of the in/out fluid flow direction.
- The smart valve assembly controls the flow direction preventing cross contamination of the new and old fluid.
- Monitored electronic load cell and flow sensors to double ensure precise fluid replacement.
- Reliable operation through the use of integrated functional pipeline modules.
- Various alarm/indicator information and automatic protection measures prevent to damage ATF systems.
- Membrane keypad, LCD screen, simple operation with user friendly interface.
- USB Port for future data updates.

Functions

- A/T fluid equivalent exchange
- A/T fluid volume adjustment (add/discharge)
- Automatic discharging of used fluid
- Circulation cleaning
- Automatic protection of new fluid shortage
- Alarm of high fluid level in onboard tanks
- Exchange volume settable
- Timed circulation cleaning
- Automatically regulated fluid exchange pressure
- View window of new and old fluid level
- Automatically determines if the onboard old fluid tank can meet the capacity demand for exchange
